[The Potomac River Basin and Its Estuary: Landscape Loadings and Water Quality Trends, 1895 - 2005 \(2007\)](#)

Many data analysis products in the “gray literature” contain valuable information and insights about the tidal Potomac River but are difficult to find or access. These include summaries, project reports, university theses, manuscripts, species lists, slide presentations, issue papers, and other writings that may or may not constitute enough material for publication in peer-reviewed journals. The Commission seeks to better preserve these analysis products and make them more accessible. It is establishing the Potomac Integrative Analysis Online Collection at the ICPRB website and inviting authors to contribute ( [Guide to Contributors](#) ). The Online Collection can host documents, and it can provide links to documents located at other websites.
